NATHANIAL LIVIA

Kitchen Science Lab for Kids Houghton Mifflin Harcourt
Brian Kateman coined the term "Reductarian"—a person who is deliberately reducing his or her consumption of meat—and a global movement was born. In this book, Kateman, the founder of the Reductarian Foundation, presents more than 70 original essays from influential thinkers on how the simple act of cutting 10% or more of the meat from one's diet can transform the life of the reader, animals, and the planet. This book features contributions from such luminaries as Seth Godin, Joel Fuhrman, Victoria Moran, Jeffrey Sachs, Bill McKibben, Naomi Oreskes, Peter Singer, and others. With over 40 vegan, vegetarian, and "less meat" recipes from bestselling cookbook author Pat Crocker, as well as tons of practical tips for reducing the meat in

your diet (for example, skip eating meat with dinner if you ate it with lunch; replace your favorite egg omelet with a tofu scramble; choose a veggie burrito instead of a beef burrito; declare a meatless day of the week), *The Reductarian Solution* is a life—not to mention planet!—saving book.

[The Psychopath Test](#) National Geographic Books

AN AMAZON BEST BOOK OF 2021 'Delightful' Ed Yong What's to be done about a drunken elephant? A monkey caught mugging passers-by? A trespassing squirrel? Follow Mary Roach as she investigates laser scarecrows, robo-hawks, human-elephant conflict specialists and monkey impersonators. Travel to the bear-busy back alleys of Aspen, the gull-vandalized floral displays at the Vatican and leopard-terrorized hamlets in the Himalayas. In this fresh, funny and thoroughly researched book, dive into the weird and wonderful moments when humanity and wildlife bump up against one another.

The Dude and the Zen Master Parallax Press

A look inside the world of forensics examines the use of human cadavers in a wide range of endeavors, including research into new surgical procedures, space exploration, and a Tennessee human decay research facility.

Gulp Lab for Kids

Get stuck in ... Why do some people become demons when they get behind a wheel? Why does the other lane always move faster? Why do New Yorkers jaywalk (and nobody does in Copenhagen)? And why should you never drive with any beer-drinking, divorced doctors named Fred? Driving is about far more than getting from A to B. As Tom Vanderbilt's brilliant, curiosity-filled book shows, it's actually the key to deciphering human nature and ... well, pretty much everything. From the etiquette of horn-honking to bumper stickers you should avoid, from gridlock in ancient Rome to why getting rid of road signs actually reduces accidents, *Traffic* will change the way you see yourself, and other people (and not just through your windscreen).

The Best American Science and Nature Writing 2011 W. W.

Norton & Company

What if society wasn't fundamentally rational, but was motivated by insanity? This thought sets Jon Ronson on an utterly compelling adventure into the world of madness. Along the way, Jon meets psychopaths, those whose lives have been touched by madness and those whose job it is to diagnose it, including the influential psychologist who developed the Psychopath Test, from whom Jon learns the art of psychopath-spotting. A skill which seemingly reveals that madness could indeed be at the heart of everything . . . Combining Jon Ronson's trademark humour, charm and investigative incision, *The Psychopath Test* is both

entertaining and honest, unearthing dangerous truths and asking serious questions about how we define normality in a world where we are increasingly judged by our maddest edges.

Traffic Penguin Canada

The best-selling author of *Stiff* and *Bonk* explores the irresistibly strange universe of space travel and life without gravity. Space is a world devoid of the things we need to live and thrive: air, gravity, hot showers, fresh produce, privacy, beer. Space exploration is in some ways an exploration of what it means to be human. How much can a person give up? How much weirdness can they take? What happens to you when you can't walk for a year? have sex? smell flowers? What happens if you vomit in your helmet during a space walk? Is it possible for the human body to survive a bailout at 17,000 miles per hour? To answer these questions, space agencies set up all manner of quizzical and startlingly bizarre space simulations. As Mary Roach discovers, it's possible to preview space without ever leaving Earth. From the space shuttle training toilet to a crash test of NASA's new space capsule (cadaver filling in for astronaut), Roach takes us on a surreally entertaining trip into the science of life in space and space on Earth.

The Secret History of Kindness: Learning from How Dogs

Learn Simon and Schuster

"America's funniest science writer" (Washington Post) asks the questions children ask in this young readers adaptation of her best-selling *Packing for Mars*.

Gulp: Adventures on the Alimentary Canal St. Martin's Press

Kitchen Science Lab for Kids: EDIBLE EDITION gives you 52 delicious ways to explore food science in your own kitchen by

making everything from healthy homemade snacks to scrumptious main dishes and mind-boggling desserts. When you step into your kitchen to cook or bake, you put science to work. Physics and chemistry come into play each time you simmer, steam, bake, freeze, boil, puree, saute, or ferment food. Knowing something about the physics, biology, and chemistry of food will give you the basic tools to be the best chef you can be. Bodacious Bubble Tea, Flavorful Fruit Leather, Super Spring Rolls, Mouthwatering Meatballs...divided by course, each lab presents a step-by-step recipe for a delicious drink, snack, sauce, main dish, dessert, or decoration. The Science Behind the Food section included with each recipe will help you understand the science concepts and nutrition behind the ingredients. Have fun learning about: Bacteria and the chemical process of fermentation by making your own pickled vegetables. Emulsion as you create your own vinaigrette. How trapped water vapor causes a popover to inflate as you make your own. Crystals by making your own ice cream. Mix and match the recipes to pair pasta with your favorite sauce, make ice cream to serve in homemade chocolate bowls, or whip up the perfect frosting for your cake. There are plenty of fun, edible decorations included for the art lovers in the crowd. Before long, you'll have the confidence to throw together a feast, bake and decorate show-worthy cakes, or use what you've learned to create your own recipes. For those with food allergies, all recipes are nut-free and other allergens are clearly labeled throughout. Let's get cooking—and learning! The popular Lab for Kids series features a growing list of books that share hands-on activities and projects on a wide host of topics, including art, astronomy, clay, geology, math, and even how to create your

own circus—all authored by established experts in their fields. Each lab contains a complete materials list, clear step-by-step photographs of the process, as well as finished samples. The labs can be used as singular projects or as part of a yearlong curriculum of experiential learning. The activities are open-ended, designed to be explored over and over, often with different results. Geared toward being taught or guided by adults, they are enriching for a range of ages and skill levels. Gain firsthand knowledge on your favorite topic with Lab for Kids. *Gulp: Adventures on the Alimentary Canal* W. W. Norton & Company

The humor scientist behind *Stiff: The Curious Lives of Human Cadavers* and *Spook: Science Tackles the Afterlife* takes a tour of the human digestive system, explaining why the stomach doesn't digest itself and whether constipation can kill you. *Kitchen Science Lab for Kids: EDIBLE EDITION* Mountain Arbor Press

"Undeniably exquisite . . . Reveal s] not only how science actually happens but also who or what propels its immutable humanity." -
-Maria Popova "An excellent introduction to the key issues in science today." --P. D. Smith, Guardian "A] stellar compendium .

. . . Delightful to read." --Publishers Weekly, starred review A renowned scientist and the best-selling author of *Lab Girl*, Hope Jahren selects the year's top science and nature writing from writers who balance research with humanity and in the process uncover riveting stories of discovery across disciplines.

Stiff University of Chicago Press

The best-selling author of *Stiff* turns her outrageous curiosity and infectious wit on the most alluring scientific subject of all: sex.

The study of sexual physiology—what happens, and why, and how to make it happen better—has been a paying career or a diverting sideline for scientists as far-ranging as Leonardo da Vinci and James Watson. The research has taken place behind the closed doors of laboratories, brothels, MRI centers, pig farms, sex-toy R&D labs, and Alfred Kinsey's attic. Mary Roach, "the funniest science writer in the country" (Burkhard Bilger of *The New Yorker*), devoted the past two years to stepping behind those doors. Can a person think herself to orgasm? Can a dead man get an erection? Is vaginal orgasm a myth? Why doesn't Viagra help women—or, for that matter, pandas? In *Bonk*, Roach shows us how and why sexual arousal and orgasm, two of the most complex, delightful, and amazing scientific phenomena on earth, can be so hard to achieve and what science is doing to slowly make the bedroom a more satisfying place.

Packing for Mars for Kids ECW Press

Jeff Bridges is one of the world's most popular actors and his unforgettable performance as The Dude in Coen Brothers film, *The Big Lebowski*, made him a cult hero. His remarkable career as an actor, performer and songwriter has brought him an Oscar, a Golden Globe and a Critics Choice award. Away from the spotlight, Bridges is a dedicated practitioner of Zen Buddhism and for more than a decade has been close friends with Zen leader Bernie Glassman. It is Glassman who has helped guide Bridges' lessons on the path to enlightenment and the two have spent many hours discussing life, love, the movies, creativity, happiness and death. With wit, charm and profound insight, Bridges and Glassman discover the Zen in iconic scenes and lines from *The Big Lebowski*. With honesty and humour, Bridges

explores how his Zen practice and his life experience inform one another as he discusses his loving relationship with his parents, his marriage, his highly successful career and his warm connection with his fans.

Grunt Pan Macmillan

An intimate, surprising look at man's best friend and what the leading philosophies of dog training teach us about ourselves. Years back, Melissa Holbrook Pierson brought home a border collie named Mercy, without a clue of how to get her to behave. Stunned after hiring a trainer whose immediate rapport with Mercy seemed magical, Pierson began delving into the techniques of positive reinforcement. She made her way to B. F. Skinner, the behavioral psychologist who started it all, the man who could train a pigeon to dance in minutes and whose research on how behavior is acquired has ramifications for military dolphin trainers, athletes, dancers, and, as he originally conceived, society at large. To learn more, Pierson met with a host of fascinating animal behaviorists, going behind the scenes to witness the relationships between trainers and animals at the National Zoo in Washington, DC, and to the in-depth seminars at a Clicker Expo where all the dogs but hers seemed to be learning new tricks. The often startling story of what became of a pathbreaking scientist's work is interwoven with a more personal tale of how to understand the foreign species with whom we are privileged to live. Pierson draws surprising connections in her exploration of how kindness works to motivate all animals, including the human one.

Animal Vegetable Criminal Penguin

Eating is the most pleasurable, gross, necessary, unspeakable

biological process we undertake. But very few of us realise what strange wet miracles of science operate inside us after every meal - let alone have pondered the results (of the research). How have physicists made crisps crispier? What do laundry detergent and saliva have in common? Was self-styled 'nutritional economist' Horace Fletcher right to persuade millions of people that chewing a bite of shallot seven hundred times would yield double the vitamins? In her trademark, laugh-out-loud style, Mary Roach breaks bread with spit connoisseurs, beer and pet-food tasters, stomach slugs, potato crisp engineers, enema exorcists, rectum-examining prison guards, competitive hot dog eaters, Elvis' doctor, and many more as she investigates the beginning, and the end, of our food.

Bonk Hachette UK

Gulp: Adventures on the Alimentary Canal (2013) by Mary Roach explores the curiosities of digestion. Following the journey that food takes through the body, Gulp explores an intricate system full of self-balancing processes... Purchase this in-depth summary to learn more.

Spook Penguin UK

Why would someone want to create or own the mounted skin of a dead animal? That's the question Dave Madden explores in The Authentic Animal. Madden starts his journey with the life story of Carl Akeley, the father of modern taxidermy. Akeley started small by stuffing a canary, but by the end of his life he had created the astonishing Akeley Hall of African Mammals at The American Museum of Natural History. What Akeley strove for and what fascinates Madden is the attempt by the taxidermist to replicate the authentic animal, looking as though it's still alive. To get a

first-hand glimpse at this world, Madden travels to the World Taxidermy Championships, the garage workplaces of people who mount freeze-dried pets for bereaved owners, and the classrooms of a taxidermy academy where students stretch deer pelts over foam bases. On his travels, he looks at the many forms taxidermy takes—hunting trophies, museum dioramas, roadside novelties, pet memorials—and considers what taxidermy has to tell us about human-animal relationships. The Authentic Animal is an entertaining and thought-provoking blend of history, biology, and philosophy that will make readers think twice the next time they scoff at a moose head hung lovingly on a wall.

Gulp Harlequin

A finalist for the Los Angeles Times Science & Technology Book Prize 'The most entertaining writer in science' - The Times, Books of the Year War. Mention it and most of us think of history, of conflicts on foreign soil, of heroism and compromise, of strategy and weapons. But there's a whole other side to the gruesome business of the battlefield. In Grunt, the inimitable Mary Roach explores the science of keeping human beings intact, awake, sane, uninfected and uninfested in the bizarre and extreme circumstances of war. Setting about her task with infectious enthusiasm, she sniffs World War II stink bombs, tests earplugs in a simulated war zone and burns the midnight oil with the crew of a nuclear submarine. Speaking to the scientists and the soldiers, she learns about everything from life-changing medical procedures to innovations as esoteric as firing dead chickens at fighter jets. Engrossing, insightful and laugh-out-loud funny, this is an irresistible ride to the wilder shores of modern military life.

The Origin of Feces W. W. Norton & Company

What if there were no prisons? Alternative approaches to dealing with crime are underway around the world to explore how victims, offenders, and communities can heal rifts and repair damage. It's often called restorative justice. It's a way to think about the deeper reasons behind crimes, and suggests that by building more caring communities, it's possible to change our societies and ourselves. *Making It Right* relates true stories of young people who are working in innovative ways to further peaceful resolution of conflict and to heal past wounds. The book begins with individual injustices, such as bullying, and works up to collective ones, like wars. Each chapter begins with a dramatic fictional account, making the topic engaging and relevant for kids. Restorative justice isn't going to change the world overnight, nor will it end all crime or prevent all wars. But it's a powerful way to get teens thinking about how they can participate in building a more peaceful society. "

Steamed Random House

Jandy Nelson's beloved, critically adored debut is now an Apple TV+ and A24 original film starring Jason Segel, Cherry Jones, Grace Kaufman, and Jacques Colimon. "Both a profound meditation on loss and grieving and an exhilarating and very sexy romance." —NPR Adrift after her sister Bailey's sudden

death, Lennie finds herself torn between quiet, seductive Toby—Bailey's boyfriend who shares Lennie's grief—and Joe, the new boy in town who bursts with life and musical genius. Each offers Lennie something she desperately needs. One boy helps her remember. The other lets her forget. And she knows if the two of them collide, her whole world will explode. As much a laugh-out-loud celebration of love as a nuanced and poignant portrait of loss, Lennie's struggle to sort her own melody out of the noise around her makes for an always honest, often uproarious, and absolutely unforgettable read.

The Sky Is Everywhere (Movie Tie-In) Little, Brown

An entertaining and enlightening exploration of why waste matters, this cultural history explores an often ignored subject matter and makes a compelling argument for a deeper understanding of human and animal waste. Approaching the subject from a variety of perspectives--evolutionary, ecological, and cultural--this examination shows how integral excrement is to biodiversity, agriculture, public health, food production and distribution, and global ecosystems. From primordial ooze, dung beetles, bug frass, cat scats, and flush toilets to global trade, pandemics, and energy, this is the awesome, troubled, uncensored story of feces.
