Science (With the largest MCQ Question Pool for 2021-22 Exam) S. Chand Publishing

This book teaches computer programming to the complete beginner using the native C language.

As such, it assumes you have no knowledge whatsoever about programming. The main goal of this

book is to teach fundamental programming principles using C, one of the most widely used

programming languages in the world today. We discuss only those features and statements in C

that are necessary to achieve our goal. Once you learn the principles well, they can be applied to

any language. If you are worried that you are not good at high-school mathematics, don't be. It is a

myth that you must be good at mathematics to learn programming. C is considered a 'modern'

language even though its roots date back to the 1970s. Originally, C was designed for writing

'systems' programs—things like operating systems, editors, compilers, assemblers and

input/output utility programs. But, today, C is used for writing all kinds of applications programs as

well—word processing programs, spreadsheet programs, database management programs,

accounting programs, games, robots, embedded systems/electronics (i.e., Arduino), educational

software—the list is endless. Note: Appendices A-D are available as part of the free source code

download at the Apress website. What You Will Learn: How to get started with programming using

the C language How to use the basics of C How to program with sequence, selection and repetition

logic How to work with characters How to work with functions How to use arrays Who This Book Is

For: This book is intended for anyone who is learning programming for the first time.
