'A landmark in the process of decolonizing imperial Western knowledge.' Walter Mignolo, Duke University To the colonized, the term 'research' is conflated with European colonialism; the ways in which academic research has been implicated in the throes of imperialism remains a painful memory. This essential volume explores intersections of imperialism and research - specifically, the ways in which imperialism is embedded in disciplines of knowledge and tradition as 'regimes of truth.'

Concepts such as 'discovery' and 'claiming' are discussed and an argument presented that the decolonization of research methods will help to reclaim control over indigenous ways of knowing and being. Now in its eagerly awaited second edition, this bestselling book has been substantially revised, with new case-studies and examples and important additions on new indigenous literature, the role of research in indigenous struggles for social justice, which brings this essential volume urgently up-to-date.

The Government of Pakistan strongly supports public-private partnership (PPP) initiatives. From 1990 to 2019, Pakistan witnessed 108 financially closed PPP projects, with a total investment of approximately \$28.4 billion. About 88% of these projects are in the energy sector, attracting more than \$24.7 billion, followed by investments in the port sector. In early 2021, Parliament approved the amendments to the 2017 PPP Law, enacting the Public Private Partnership Authority (Amendment) Act 2021. This further strengthens the enabling legal and regulatory framework for developing and implementing PPPs, thereby promoting private sector investment in public infrastructure and related services.

The Institute of Medicine study Crossing the Quality Chasm (2001) recommended that an interdisciplinary summit be held to further reform of health professions education in order to enhance quality and patient safety. Health Professions Education: A Bridge to Quality is the follow up to that summit, held in June 2002, where 150 participants across disciplines and occupations developed ideas about how to integrate a core set of competencies into health professions education. These core competencies include patient-centered care, interdisciplinary teams, evidence-based practice, quality improvement, and informatics. This book recommends a mix of approaches to health education improvement, including those related to oversight processes, the training environment, research, public reporting, and leadership. Educators, administrators, and health professionals can use this book to help achieve an approach to education that better prepares clinicians to meet both the needs of patients and the requirements of a changing health care system.

This book shows that Taiwan, unlike other countries, avoided serious economic disruption and social conflict, and arrived at its goal of multi-party competition with little blood shed.

Nonetheless, this survey reveals that for those who imagine democracy to be the panacea for every social, economic and political ill, Taiwan's continuing struggles against corruption, isolation and division offer a cautionary lesson. This book is an ideal, one-stop resource for undergraduate and postgraduate students of political science, particularly those interested in the international politics of China, and the Asia-Pacific.

Higher Education in South Africa should be of considerable interest to higher education researchers outside of South Africa, as well as within, for the general and comparative assessments it makes. The South African higher education researchers included within its covers have clearly engaged with research and writing from many parts of the world, which they have then applied to make sense of their own condition. - Malcolm Tight Lancaster University, UK

To advance education about ICT standardization, comprehensive and up-to-date teaching materials must be available. With the support of the European Commission, ETSI has developed this textbook to facilitate education on ICT standardization, and to raise the knowledge level of ICT standardization-related topics among lecturers and students in higher education, in particular in the fields of engineering, business administration and law. Readers of this book are not required to have any previous knowledge about standardization. They are introduced firstly to the key concepts of standards and standardization, different elements of the ecosystem and how they interact, as well as the procedures required for the production of standardization

documents. Then, readers are taken to the next level by addressing aspects related to standardization such as innovation, strategy, business, and economics. This textbook is an attempt to make ICT standardization accessible and understandable to students. It covers the essentials that are required to get a good overview of the field. The book is organized in chapters that are self-contained, although it would be advantageous to read the book from cover to cover. Each chapter begins with a list of learning objectives and key messages. The text is enriched with examples and case studies from real standardization practice to illustrate the key theoretical concepts. Each chapter also includes a quiz to be used as a self-assessment learning activity. Furthermore, each book chapter includes a glossary and lists of abbreviations and references. Alongside the textbook, we have produced a set of slides that are intended to serve as complementary teaching materials in face-to-face teaching sessions. For all interested parties there is also an electronic version of the textbook as well as the accompanying slides that can be downloaded for free from the ETSI website (www.etsi.org/standardization-education).

Sharpening the Sword of State explores the various ways in which 10 jurisdictions in the Asia-Pacific enhance their administrative capabilities through training and executive development. It traces how modern governments across this region look to develop their public services and public sector organisations in the face of rapid global change. For many governments there is a delicate balance between the public interest in promoting change and capacity enhancement across the public service, and the temptation to micro-manage agencies and be complacent about challenging the status quo. There is a recognition in the countries studied that training and executive development is a crucial investment in human capital but is also couched in a much wider context of public service recruitment, patterns of entry and retention, promotion, executive appointment and career development. This empirical volume, authored by academics and

practitioners, is one of the first to chart these comparative differences and provide fresh perspectives to enable learning from international experiences

Dynamic Governance John Wiley & Sons

"Public health is a global challenge, and therefore international co-operation has a high priority. The World Health Organization (WHO) is the global authority for health. But a range of other issues are involved in achieving health objectives, requiring WHO to join forces with counterparts. Two of these are the World Intellectual Property Organization (WIPO) and World Trade Organization (WTO). This book is the first ever joint study by the three, part of their collaboration on health, intellectual property, and trade. The book's focus is on advancing medical and health technologies ("innovation") and ensuring they reach the people who need them ("accessibility"). A huge amount of analytical and factual material is available on access to medicines and other medical technologies, and on innovation. Here, it is brought together in one concise volume. The book is designed to support governments and others -- particularly in developing countries -- who face an increasing demand to act, when governments want to increase access to effective treatments while containing costs. The underlying theme is: policies on these issues have to be viewed together in order to make real progress."--Publisher's description.
