Jump into Jonathan Swift's take-no-prisoners parody of seventeenth-century Christianity. Equal parts uproarious humor and incisive satire, *A Tale of a Tub* dissects the foibles and shortcomings of three brothers, each of whom represents a different branch of the Christian religion. Swift, himself a clergyman, sealed his reputation as one of England's most ruthless -- and notorious -- satirists with the book's publication. It's a thought-provoking and rollicking read whether you're a believer or a dyed-in-the-wool skeptic.

New technologies have radically transformed our relationship to information in general and to little bits of information in particular. The assessment of history learning, which for a century has valued those little bits as the centerpiece of its practice, now faces not only an unprecedented glut but a disconnect with what is valued in history education. More complex processes—historical thinking, historical consciousness or historical sense making—demand more complex assessments. At the same time, advances in scholarship on assessment open up new possibilities. For this volume, Kadriye Ercikan and Peter Seixas have assembled an international array of experts who have, collectively, moved the fields of history education and assessment forward. Their various approaches negotiate the sometimes-conflicting demands of theoretical sophistication, empirically demonstrated validity and practical efficiency. Key issues include articulating the cognitive goals of history education, the relationship between content and procedural knowledge, the impact of students' language literacy on history assessments, and methods of validation in both large scale and classroom assessments. *New Directions in Assessing Historical Thinking* is a critical, research-oriented resource that will advance the conceptualization, design and validation of the next generation of history assessments.

This is a collection of invited papers from the 1975 International Symposium on Multiple-valued Logic. Also included is an extensive bibliography of works in the field of multiple-valued logic prior to 1975 - this supplements and extends an earlier bibliography of works prior to 1965, by Nicholas Rescher in his book *Many-Valued Logic*, McGraw-Hill, 1969. There are a number of possible reasons for interest in the present volume. First, the range of various uses covered in this collection of papers may be taken as indicative of a breadth which occurs in the field of multiple-valued logic as a whole - the papers here can do no more than cover a small sample: question-answering systems, analysis of computer hazards, algebraic structures relating to multiple-valued logic, algebra of computer programs, fuzzy sets.

Second, a large part of the interest in such uses and applications has occurred in the last twenty, even ten years. It would be too much to expect this to be reflected in Rescher's 1969 book. Third, in the 1970's a series of annual symposia have been held on multiple-valued logic, which have brought much of this into a sharp focus. * The 1971 and 1972 symposia were held at the SUNY at Buffalo, the 1973 symposium at the University of Toronto, and the 1974 symposium at West Virginia University. Papers from these symposia are included in the bibliography which may be found in an appendix of this book.

Published anonymously in 1729, Jonathan Swift's satirical essay, *A Modest Proposal*, puts forth the darkly comical idea that the starving poor of Ireland might alleviate their economic condition by selling their children as food for wealthy gentlemen and ladies. At its core, Swift's *Modest Proposal* satirizes English exploitation of Ireland in particular and the heartless attitude that rich elites can develop towards the poor in general. Along with *Gulliver's Travels*, *A Modest Proposal* is an early English example of the black comedic genre. All researchers want to produce interesting and influential theories. A key step in all theory development is formulating innovative research questions that will result in interesting and significant research. Traditional textbooks on research methods tend to ignore, or gloss over, actual ways of constructing research questions. In this text, Alvesson and Sandberg develop a problematization methodology for identifying and challenging the assumptions underlying existing theories and for generating research questions that can lead to more interesting and influential theories, using examples from across the social sciences. Established methods of generating research questions in the social sciences tend to focus on 'gap-spotting', which means that existing literature remains largely unchallenged. The authors show the dangers of conventional approaches, providing detailed ideas for how one can work through such problems and formulate novel research questions that challenge existing theories and produce more imaginative empirical studies. *Constructing Research Questions* is essential reading for any researcher looking to formulate research questions that are interesting and novel.

Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. *Strengthening Forensic Science in the United States: A Path Forward* provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. *Strengthening Forensic Science in the United States* gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

Those facts. Those dates. Those four walls. Those still and petrified fossils of traditional history courses. Sure, it's history, but do we have to turn to tradition for guidance? Let's make it worth the students time. Let's give them something to take beyond their high school experience. Let's reboot history. The goal of the social studies is to provide students with the tools necessary to be active and productive citizens. History teachers need to assist their students in developing problem-solving skills for real-life scenarios, and this can be done whether we teach students about Ancient Athens or modern Akron, Ohio. The ancient Mediterranean, the Italian Renaissance, and the British East India Company are very distant concepts, far from what our students find as relevant. The same skills can be acquired by studying something nearer to the students' interests and everyday life. So, take a moment to take a step back from the history curriculum, and ask yourself: "What skills will my students need in five years?"

This title was first published in 2002. This book challenges prevalent assumptions regarding questions and enquiry. It argues that instead of trying to understand questions by reference to knowledge, knowledge can be conceived by reference to the distinctive logical form exhibited by questions. Interrogative logical form has not hitherto been recognised by logicians or philosophers generally. By providing an analysis which can serve as the basis for a fresh start in epistemology, this book breaks new ground.
