The achievements of science and technology during the past century are unparalleled in history. They provide the potential for the solution to all the problems faced by the planet, and equally for its total destruction. Allegedly scientific theories are being used to "prove" that criminality is caused, not by social conditions, but by a "criminal gene". Black people are alleged to be disadvantaged, not because of discrimination, but because of their genetic make-up. Of course, such "science" is highly convenient to right-wing politicians intent on ruthlessly cutting welfare. In the field of theoretical physics and cosmology there is a growing

tendency towards mysticism. The "Big Bang" theory of the origin of the universe is being used to justify the existence of a Creator, as in the book of Genesis . For the first time in centuries, science appears to lend credence to religious obscurantism. Yet this is only one side of the story.

 Basics Interior Design 02: Exhibition Design explores the role of the exhibition designer as a creative practitioner, and seeks to communicate a better understanding of exhibition design as a discipline. This umbrella term incorporates the development of commercial trade fairs, brand experiences, themed attractions, world expositions, museum galleries, visitor centres, historic houses, landscape interpretation and art

installations. Millions of people visit exhibitions of one sort or another every year, constituting a multi-billion dollar global industry. This book offers a comprehensive guide to the practice of exhibition design, and considers the blurring of its borders with other disciplines, such as graphic design.

In *Gesture and Power* Yolanda Covington-Ward examines the everyday embodied practices and performances of the BisiKongo people of the Lower Congo to show how their gestures, dances, and spirituality are critical in mobilizing social and political action. Conceiving of the body as the center of analysis, a catalyst for social action, and as a conduit for the social construction of reality, Covington-Ward focuses on specific flash points in the last ninety years of Congo's troubled history, when embodied performance was used to stake political claims, foster dissent, and enforce power. In the 1920s Simon Kimbangu started a Christian prophetic movement based on spirit-induced trembling, which swept through the Lower Congo, subverting Belgian

colonial authority. Following independence, dictator Mobutu Sese Seko required citizens to dance and sing nationalist songs daily as a means of maintaining political control. More recently, embodied performance has again stoked reform, as nationalist groups such as Bundu dia Kongo advocate for a return to precolonial religious practices and non-Western gestures such as traditional greetings. In exploring these embodied expressions of Congolese agency, Covington-Ward provides a framework for understanding how embodied practices transmit social values, identities, and cultural history throughout Africa and the diaspora.

People like forests- they have many emotional and cultural attachments to them. They also like forest products - and need increasing quantities of them. But they often don't like, don't understand, and don't trust what comes in between: forest management, which lies at the interface of public services (biodiversity, watersheds, etc) and private goods (timber, food, etc). Certification was developed to independently verify the quality of forest management, to communicate this to market players, and so to improve market benefits for the products of good management. The

growing influence of the Forest Stewardship Council is one of the most striking recent developments in forestry. Certification is increasingly common in all continents. But has it actually improved forest management? Has it created sufficient market incentives? Above all, has it enabled trust to develop between stakeholders, so that they can work together better, to build the institutions required for sustainable forest management? This book is the result of two years' study by IIED and collaborators in several countries: it provides evidence for considerable policy and institutional change as a result of certification, and the beginnings of change in forest and market practice.

The adulteration and fraudulent manufacture of medicines is an old problem, vastly aggravated by modern manufacturing and trade. In the last decade, impotent antimicrobial drugs have compromised the treatment of many deadly diseases in poor countries. More recently, negligent production at a Massachusetts compounding pharmacy

sickened hundreds of Americans. While the national drugs regulatory authority (hereafter, the regulatory authority) is responsible for the safety of a country's drug supply, no single country can entirely guarantee this today. The once common use of the term counterfeit to describe any drug that is not what it claims to be is at the heart of the argument. In a narrow, legal sense a counterfeit drug is one that infringes on a registered trademark. The lay meaning is much broader, including any drug made with intentional deceit. Some generic drug companies and civil society groups object to calling bad medicines counterfeit, seeing it as the deliberate conflation of public health and intellectual property concerns. Countering the Problem of Falsified and Substandard Drugs accepts the narrow meaning of counterfeit, and, because the nuances of trademark infringement must be dealt with by courts, case by case, the report does not discuss the problem of counterfeit medicines.

In this groundbreaking book, Scalia and Garner systematically explain all the most

important principles of constitutional, statutory, and contractual interpretation in an engaging and informative style with hundreds of illustrations from actual cases. Is a burrito a sandwich? Is a corporation entitled to personal privacy? If you trade a gun for drugs, are you using a gun in a drug transaction? The authors grapple with these and dozens of equally curious questions while explaining the most principled, lucid, and reliable

techniques for deriving meaning from authoritative texts. Meanwhile, the book takes up some of the most controversial issues in modern jurisprudence. What, exactly, is "textualism?" Why is "strict construction" a bad thing? What is the true doctrine of "originalism?" And which is more important: the spirit of the law, or the letter? The authors write with a well-argued point of view that is definitive yet

nuanced, straightforward yet sophisticated.
